eco_franco v2.0

eco_franco is a module developed by EcomiZ for prestashop.

This module allows us to offer the free shipping depending on the area, carriers, user groups and minimum order.

An administration interface lets you enter several rules to benefit from free shipping.

Thus you can define all the possible combination for the free shipping. (example: Free shipping from 50 euros in France or control from 120 euros in orders for the euro area with the carrier UPS).

When ordering, if the conditions are met, the shipping are automatically set to zero.

The administration module allows us to set up multiple rules to benefit from free shipping. Each rule is itself composed of several conditions on the minimum amount, area, and the carrier group.

It is sufficient that one of these rules to be validated so that the customer benefits from free shipping.

1) Zip contains

- class/franco.php
- resource/BO/css/*.css
- resource/BO/js/*.js
- resource/images/*.gif
- fr.php
- logo.gif
- Cart.php
- eco_franco.php
- ecomiz.png
- install.php
- readme_fr.pdf
- readme_en.pdf

2) Loading module

a) Via FTP

- Unzip the contents of the zip on your desktop.
- Load eco_franco FTP directory in the /modules your store.
- Change the permissions on the recursive module 777, applied to all files and subfolders.

b) Via the admin interface prestashop
- Go to the module menu prestashop back office.

- Click: ⊕ Add a module from my computer
- Select the zip file with the button "Choose module".
- Click "Load module".
- Change the permissions on the module 777 recursively applied to all files and subdirectories.

3) Installation du module

<u>Step 1)</u>
First, we must know that the module requires the overhead of the class cart. Therefore we must edit the file override/classes/Cart.php.
To do this, two possible cases:
- This is a new shop, or you do not overload the file Cart.php, in this case, just put the right 777 to the /override/classes. Indeed, during installation, the file Cart.php, containing the load required, will automatically create the corresponding directory.
- If you already overloading the Cart class then you should enter the code manually. Therefore, changing the method getOrderShippingCost present in the above file, retrieving it in the module file eco_franco/Cart.php (This is only 186 to 244 lines per frame the comment / *ECOMIZ*/) .

<u>Step 2)</u>
Go on the menu module prestashop back office and find the module "eco_franco" thanks to the search field.
Once the module is found, click the "Install" button, a message confirms that the module installation was successful.

4) Module configuration
The configuration of the various conditions to qualify for free shipping is done via the admin module. To get there, once the module is installed, simply click the "Configure" button corresponding to the module eco_franco.
<u>Step 1)</u>
The module is designed to handle every possible case, therefore we defined two levels of requirements. The first level is used to configure the minimum order to qualify for free shipping, it is therefore composed of the rules of a language and a minimum amount.
When you arrive on the configuration page, the table lists all the rules we have

Liste des règles pour bénéficier des frais de port gratuit

⊕ Ajouter une règle

Id	Libellé	Montant minimum	Action
8	Test zone	150	✎ 🗑 🔍
7	Afrique	100	✎ 🗑 🔍

added.

      To add new rules he simply click on the "Add Rule". We then propose a form of meaning to the text of the rule and the minimum order that can be 0.

      Step 2)

      We have defined a second level, which corresponds to the conditions on the carrier, area, and the client group. Indeed, to qualify for a postage, in addition to the minimum order requires that all conditions be met.

      To set the different conditions, just click on the button 🔍

      It therefore contains a second table that lists all the conditions already added to the selected rule:

Liste des conditions à respecter pour cette règle

⊕ Ajouter une zone
⊕ Ajouter un transporteur
⊕ Ajouter un groupe

Règles	Type	Libellé	Action
Test zone	Groupe	Défaut	✎ 🗑
Test zone	Groupe	Test	✎ 🗑
Test zone	Zone	North America	✎ 🗑

⇐ retour

This interface allows us using the buttons "Add" to define all the conditions for the rules. Indeed, when we click the button "Add Zone", a form allows us to select the area that benefits from this rule.

NB: It is possible to add only one zone and one carrier per rule.
